DELL PRO MAX:

Built for the AI era[1]

As creators and developers redefine the limits of what's possible in high performance computing, they need systems that keep pace

The Dell Pro Max portfolio[1] is built to do exactly that. These high-performance workstations are foundational infrastructure within the Dell AI Factory with NVIDIA.

Purpose-built for speed, scale and security, they're the perfect starting point for teams looking to explore AI locally, reducing the latency, limitations and cost of the cloud. Engineered for unmatched performance, Dell Pro Max workstations harness the full potential of the latest NVIDIA RTX PRO GPUs. They deliver the power and reliability needed to tackle demanding workloads, from advanced business applications to design and creative workflows to AI training, development and inferencing.

Learn how your team can move fast, test freely, and innovate with AI confidently.

commercial PCs shipped into the enterprise by 2030 will be a workstation as more organizations recognize their value for mission-critical workloads.[2]

#1

workstation brand worldwide.[3]

Launch your AI development with Dell Pro Max

In collaboration with NVIDIA, the Dell Pro Max portfolio delivers seamless integration points and continuous innovation across platforms, software and services.

Dell Pro Max laptops:

Power through demanding workloads: Discrete NVIDIA RTX PRO Blackwell laptop GPU options enhance performance up to 53% for demanding tasks.

Work interrupted: Advanced thermal innovation decreases product temperatures while increasing fan performance up to 36%.

Dell Pro Max 16 Plus has a 53% graphic improvement versus the previous generation product.**

Dell Pro Max 18 Plus has a 44% graphic improvement versus the previous generation product.***

Dell Pro Max 16 Plus increases 36% total performance, while decreasing product temperatures (–6°C on C-cover and –4°C on D-cover vs 7680). ****

Dell Pro Max 18 Plus increases 30% total performance, while decreasing product temperatures (–5°C on C-cover and –3°C on D-cover vs 7780). *****

Dell Pro Max desktops:

Extreme performance at your desk: Tackle the most demanding workflows with flexible configuration options from one, up to four NVIDIA RTX PRO GPUs.† Redefine performance with unmatched AI processing power.

Maximize capabilities: Scale your AI environments more efficiently with enhanced CPU power, maximized GPU performance and increased PCIe expandability.

The Dell Pro Max Tower T2 is the world's fastest for single-threaded application performance.*****

The Dell Pro Max Micro is the world's smallest workstation with dual-wide discrete graphics.******

The Dell Pro Max Tower T2 is the world's most powerful tower workstation in its class.******

AI development at your desk side

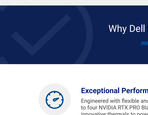
Designed for local sandbox experimentation, Dell Pro Max solutions reduce cloud costs and security concerns, while offering a seamless way to explore, build and scale with NVIDIA AI software and models.

New solutions designed specifically for AI development

Built with AI developers in mind

Power through demanding workloads and up to billion parameter models directly on the Dell Pro Max with GB10 and up to massive trillion parameter models on the Dell Pro Max with GB300. Access powerful tools with the NVIDIA AI software stack to streamline AI development and deployment.

Whether it's your primary AI development system or a specialized accelerator workstep alongside your main Dell Pro Max workstation, these systems are incredibly flexible – either the star of the show or the ultimate supporting player. And with the NVIDIA Grace Blackwell Superchip, experience seamless AI integration and scaling from desktop to the data center.



Dell Pro Max with GB10

Incredible power in a compact design

- 1,000 TFLOPS of FP4 computing power
- Supports up to 200 billion parameter models
- Supports 1 or 2 stacked configurations
- Powered by NVIDIA GB10 Grace Blackwell Superchip
- Runs Linux
- Comes pre-configured with NVIDIA's AI Software Stack, including DGX OS, drivers, and GPU-accelerated libraries

Learn More

Dell Pro Max with GB300

Massive performance for heavy-duty workloads

- Up to 20,000 TFLOPS of FP4 computing power
- Supports up to 1 trillion parameter models
- Powered by NVIDIA GB300 Grace Blackwell Ultra Desktop Superchip
- Runs Linux
- Comes pre-configured with NVIDIA's AI Software Stack, including DGX OS, drivers, and GPU-accelerated libraries

When you're ready to scale, Dell Technologies makes it easy

With an end-to-end portfolio that delivers industry-leading solutions, you can begin at the edge with Dell Pro Max workstations and NVIDIA AI software and models. When you're ready to scale, the Dell AI Factory with NVIDIA makes this transition effortless.

Learn How

Wherever you are in your AI journey, Dell Technologies meets you there.

Why Dell Pro Max

Exceptional Performance

Engineered with flexible and powerful configurations in mind, scales up to four NVIDIA RTX PRO Blackwell GPUs, high wattage processors and innovative thermals to power AI, design and data-heavy workloads.

Certified Reliability[5]

Tested and certified for 100+ ISV applications to ensure consistent, high-performance results across professional software.

Unmatched Security

The industry's most secure and manageable commercial AI PCs.[6] built to protect sensitive data and maintain compliance.

Scalability For Your AI Goals

As foundational infrastructure within the Dell AI Factory with NVIDIA, Dell Pro Max enables seamless scaling from a sandbox environment and local AI development to full-enterprise-scale deployment.

Built to Meet Your Needs

Tailored for professionals with data-intensive, creative or technical workloads, Dell Pro Max has a high-performance PC option that's right for you, so you can work smarter and faster.

Infrastructure that evolves with you

AI development and innovation doesn't stand still—and neither should your technology. Dell Pro Max adapts as workloads grow more complex, ensuring that professionals can continue to innovate without hardware limitations.

Designed for anyone who needs maximum power and performance

Whether they're building models, designing simulations or generating content, Dell Pro Max supports all professionals who need high-performance compute power to innovate and work faster.

Developers & Data Scientists

Train and deploy AI models, build digital twins and optimize code.

Designers & Creators

Accelerate 3D rendering, generative AI and video editing.

Analysts & Researchers

Explore datasets, visualize results and run simulations.

Power Users & Collaborators

Enhance collaboration and security, digital assistants, and code generation.

Enterprise IT & AI Teams

Collaborate securely with scalable, high performance infrastructure.

Your AI edge starts with Dell Pro Max

Dell Pro Max gives professionals the tools to innovate without compromise — locally, securely and at speed.

Designed for today's AI challenges. Ready for tomorrow's.

1. AI findings in this infographic are from the IDC white paper "Ai PCs and Workstations: Future Proofing for Tomorrow" from February 2025.
2. IDC Future Scape (IDC FutureScape) Worldwide Connected Devices 2025 Predictions) October 2024
3. Based on IDC Worldwide Quarterly Workstation Tracker, February 2, 2025 - Units.
4. Up to four NVIDIA RTX PRO GPUs available only in the Dell Precision 7960 workstation.
5. New Dell Pro Max systems are still going through testing.
6. "Most secure" is based on Dell internal analysis, October 2024. Applicable to PCs on Intel processors. Not all features available with all PCs. Additional purchase required for full functionality. Dedicated to Precision.

*Dell Pro Max PCs previously referred to as Dell Precision workstations

**Dell Pro Max 16 Plus has a 53% graphic improvement versus the previous generation product (Dell Precision 7680). Based on internal testing of the Dell Pro Max 16 Plus and Dell Precision 7680, May 2025.

***Dell Pro Max 18 Plus has a 44% graphic improvement versus the previous generation product (Dell Precision 7780). Based on internal testing of the Dell Pro Max 18 Plus and Dell Precision 7780, May 2025.

****Dell Pro Max 16 Plus increases 36% total performance, while decreasing product temperatures (–6 °C on C-cover and –4°C on D-cover vs 7680). Based on internal testing of the Dell Pro Max 16 Plus and Dell Precision 7680, May 2025.

*****Dell Pro Max 18 Plus increases 30% total performance, while decreasing product temperatures (–5 °C on C-cover and –3°C on D-cover vs 7780). Based on internal testing of the Dell Pro Max 18 Plus and Dell Precision 7780, May 2025.

†Configurations available at launch include one GB10 Grack, HP Z2 Tower G1a and Lenovo P3 Tower, February 2025.

††Based on internal analysis of competitors within the entry level workstation space, Lenovo P3 Ultra, HP Z2 G9 Mini, HP Z2 G1a Mini and Lenovo P3 Tiny, February 2025.
